
Forest: n=165 | Shrubland: n=212 | Grassland: n=836 | Reforestation: n=310
Depth effect within land cover (Wald F-test): Forest p=7.1e-24 | Shrubland p=1.0e-15 | Grassland p=6.5e-18 | Reforestation p=4.4e-15
Points: estimated marginal means (landscapes pooled with equal weights; model including the land cover x depth interaction) ± 95% CI. Depth classes are equally spaced (not to scale). Land covers are offset within each class for readability. Letters: capital = land covers compared within a depth; lowercase = depths compared within a land cover (Holm); the same letter indicates no significant difference.
